someone knows how to do that please
reply. Pharmacokinetics of topotecan in children
with refractory solid tumors. Topotecan is a novel
water-soluble semisynthetic analog of
camptothecin with a broad spectrum of activity.
In adults, this agent has shown activity against a
variety of solid tumors, including pediatric
sarcomas. The purpose of this study was to
determine whether topotecan could be safely used
to treat pediatric solid tumors. Thirty-one
children with relapsed or refractory solid tumors
were treated with topotecan. Patients received a
bolus infusion of topotecan at 0.75 mg/m²/day
over 90 minutes, every 3 weeks. The mean age of
children enrolled was 5 years, and the median
number of prior therapies received was two.
There were ten male and 21 female patients.
Thirteen patients (42%) had received previous
chemotherapy, including two patients who had
received prior topotecan. The major toxicity was
a distinct and reversible infusion-associated

reaction (only grade 3 in two children). Other toxicity included mild diarrhea, nausea, vomiting, mucositis, and grade 1 to 2 headaches. The overall response rate was 17% (grade 3) and 28% (grade 4) among evaluable children.

Chemotherapy was administered in a median of 2 cycles (range: 1-6 cycles). The median time to disease progression was 8 weeks (range: 4-52 weeks). This pilot study suggests that topotecan can be safely used to treat patients with refractory solid tumors. However, further investigations are needed to define the optimal dose and schedule of topotecan for children with solid tumors.

Q: Why do I get this Java Exception? I am learning about switching in Java, but I get an error I can't seem to fix.

```
class Main { public static void  
main(String[] args) { System.out.println("test");  
switch (true) { case true:
```

```
System.out.println("same");
```
